

Many Threats, **One Solution.**™

## BIO-OXYGEN® CHEM DECON

**Non Corrosive • No VOCs • Environmentally Safe • Non Toxic**

**For Meth Lab Remediation, Smoke Damage, HAZMAT, Crime Scene Clean-Up, Hoarder Clean-Up, Trash Outs, Chinese Drywall Remediation, Petroleum Storage Tank Clean-Up, etc.**

This patented, advanced formula has been used successfully world-wide for over 10 years in every extreme situation you can imagine. Our powerful Chem Decon solution is proven to effectively cut through bio-film for safe removal and neutralization of tear gas, smoke damage, explosive residue, chemicals used in manufacturing of methamphetamine and all types of biological and chemical hazards.

Bio-Oxygen® Chem Decon proves its value with excellent results from clearance tests, significantly lowered remediation costs, reduced the overall manpower hours, reduced equipment needs, and other supplies otherwise necessary to meet health and safety guidelines. Chem Decon

is inherently biodegradable, non-toxic, environmentally safe, reliable and cost effective.

Traditional Meth lab remediation methods can require up to three separate wash-downs of all surfaces using a variety of cleaners. Even then, the toxins are never really neutralized; just suspended in water then mechanically removed. With Chem Decon, Remediators follow the proven protocol and apply the solution to the contaminated surfaces. Once the required reaction time is complete, field test studies have demonstrated that the contamination is destroyed along with the toxin and odorous affect.

Advanced Chemistry for the **Professional Remediator**

**Artemis Bio-Solutions**

# Artemis Bio-Solution's Proven Technology

Sandia National Laboratories is a multi-program laboratory operated by Sandia Corp., a Honeywell International Company for the United States Department of Energy under contract DE-AC04-94AL85000. Sandia developed the most advanced full spectrum solution for chemical and biological decontamination. This formulation is currently being used by the US Military, Fema, and Federal agencies for neutralizing biological and chemical hazards from terrorist threats and neutralizing contamination after natural disasters like Super Storm Sandy and Hurricane Katrina. Sandia's decontamination formulation is so advanced they have patented the formula. Artemis Bio-Solutions has been granted a license from Sandia (license No. 00-C02678); to utilize this patented technology to formulate our Bio-Oxygen® line of products for commercial and professional use. All Bio-Oxygen® Products meet Sandia's quality standards and are routinely tested for performance and efficacy.

## Artemis Bio-Oxygen® Chem Decon Remediator Benefits

- Proven effective in thousands of environmental remediation projects
- Saves more of the building materials, ductwork and structures
- Reduces the need to demolish, tear-out and re-build walls, ceilings, etc. (Saves \$\$\$)
- Significantly reduces remediation costs
- Easy to mix and apply
- Reduces labor and keeps your employees safe
- Inherently biodegradable, non-toxic, and environmentally safe
- No need for special application equipment
- Neutralizes Methamphetamine and these components used to make Meth: Hydrochloric and Sulfuric Acids; Solvents like Acetone, Toluene, Ether, Salts, Drain Cleaners, Lye, Anhydrous Ammonia, Red Phosphorus and Iodine
- Clean-up requires only clean water and is very safe and easy compared to past methods
- Property owners can more quickly have their property restored and safely occupied
- Happy Clients = More Referrals = More Jobs = Growth for your Business

Now there's a better way to eradicate contamination left behind from the illegal manufacture of Methamphetamine. Test after test proves that Chem Decon works. It takes areas of contamination as high as 15 micro grams per 100 cm squared to non-detectable levels. In most states the goal is .05 micrograms. Take the time to contact us and learn how this revolutionary product can increase your business.

Chem Decon was developed directly with Certified Industrial Hygienists and Meth Lab and Bio Hazard Clean Up professionals. This proprietary formula was perfected to neutralize both chemical and biological agents in less than one hour. It's environmentally friendly and easy to apply. Once fogged, sprayed or foamed, the activated solution draws the contamination into the liquid where the hazard is chemically altered, rendering the contamination harmless.

Clandestine Meth Labs spanning across the country were randomly selected for field tests and were effectively remediated every time. In every instance, Chem Decon removed the residual meth and biofilm bringing first time

clearance test samples to near non-detectable levels by the Certified Industrial Hygienists. From the North, South, East and West, with varying humidity levels, and temperatures, Chem Decon consistently performed excellently!

Bio-Oxygen® Chem Decon is now available for the professional remediator. It provides safe, reliable and effective decontamination that neutralizes toxic methamphetamine and other chemical and biological hazards without damaging surfaces. You can rely on its power to quickly and safely restore structures without harming the environment.
